

### DBMS Labsheet-1

1. Create a database named Stuenets\_Info.
2. Create the table as given below.

**Student**

| SNO | Sname | Saddress | Sage |
|-----|-------|----------|------|
|     |       |          |      |

3. Add new column SDOB to the above table.
4. Remove the column Sage from the above table.
5. Change the column name SNO to student\_id.
6. Change the data type of Student\_id to varchar.
7. Change the name of the existing table to KCC\_Students.

### DBMS Labsheet-1
