If other business stakeholders are present, the discussion between them and the other JAD members may cause them to realize that additional business requirements need to be captured. The BA would elicit and capture those requirements. If technical requirements come to light, the BA may capture those if they have the necessary expertise, or else rely on a systems analyst to do so at the meeting.

A JAD is successful, and therefore the Business Analyst is successful, when there is a "meeting of the minds" among all of the individuals present with agreement on what kind of solution needs to be developed to fully address business needs, with all requirements put in writing to facilitate development.

Do your homework prior to the business analysis interview!

Having an idea of the type of questions you might be asked during a business analyst interview will not only give you confidence but it will also help you to formulate your thoughts and to be better prepared to answer the interview questions you might get during the interview for a business analyst position. Of course, just memorizing a list of business analyst interview questions will not make you a great business analyst but it might just help you get that next job.
