

Role:

Role is a named group of related privileges that can be granted to the user.
The method makes it easier to revoke and maintain privileges

A user can have access to several roles and several users can be assigned the same role.

Roles are typically created for database application. This makes the DBA to ease the user management

Steps:

1. Create a role
 create role student;
2. assign privileges to role
 grant create session to student;
3. assign role to the user
 grant student to user1,user2;

login from user1 and try to create table

```
grant create table to student;  
---
```

create another role and grant to user;

```
--> revoke role  
--> revoke privilege from role
```

data dictionary views;

```
dba_roles  
dba_users
```

```
role_sys_privs  
role_tab_privs  
user_role_privs
```

```
user_sys_privs  
user_tab_privs
```

```
user_tab_privs_made  
user_tab_privs_recd  
user_col_privs_recd
```
